

David Bedolla, PhD

Robotics Software Engineer | Manipulation, Robot Learning & Real-Time Systems

Portfolio | [LinkedIn](#) | [GitHub](#) | davidbedollamartinez@outlook.es | Montréal, QC, Canada

PROFESSIONAL PROFILE

PhD-level robotics software engineer with completed work in physical Kinova Gen3 control, mobile manipulation, ROS 2 and C++, teleoperation, force-aware interaction, multimodal sensing, and real-time exoskeleton deployment. Robot-learning experience includes Gaussian Process control models, neural-network inverse kinematics, and PyTorch reinforcement-learning experiments in simulation. I also adapted contact sensing across Gazebo and MuJoCo.

Learning from Demonstration for manipulation is my current development direction, supported by completed work in teleoperation, multimodal sensing, cross-simulator contact modeling, and model-based execution.

PROFESSIONAL EXPERIENCE

Associate Researcher

Mar 2026-Present | Lab INIT Robots, Montréal

- Deployed 400 Hz ROS 2 and C++ whole-body control on a physical 10-DoF AgileX and Kinova Gen3 mobile manipulator.
- Implemented analytical position targets and Pinocchio Jacobian joint velocities for Cartesian tracking, elbow reconfiguration, joint limits, filtered odometry, and arm-base coordination.
- Integrated command validation, safe state transitions, PS4 teleoperation, Gazebo/MuJoCo validation, and a common ROS 2 tactile-map interface adapted from Lab-CORO TSF-85.

Postdoctoral Researcher

Mar 2025-Mar 2026 | École de technologie supérieure (ÉTS), Montréal

- Reduced lower-limb robot control latency by 30 times, enabling torque control; improved ROS/Python scheduling for vehicle testing.
- Developed symbolic dynamics and inverse-kinematics tools and delivered 6-DoF IK and motion-control support to international assistive robotics teams.

Research Professor

Mar 2024-Mar 2025 | Universidad Tecnológica de la Mixteca, Mexico

- Developed and tested 7-DoF controller optimization that reduced tracking error by 20 percent; contributed mechanical and control requirements to a three-finger adaptive gripper.

Research Assistant

Jan 2020-Dec 2023 | École de technologie supérieure (ÉTS), Montréal

- Deployed a 1-4 kHz LabVIEW RT/FPGA and C++ stack on a physical 7-DoF exoskeleton, including DAQ, actuator interfaces, safety logic, and trajectory execution.
- Integrated ATI Nano17 force/torque sensing, admittance control, external-force observation, and IMU, EMG, and depth-camera motion acquisition.
- Deployed Gaussian Process residual modeling in robust MPC with sliding-mode compensation at approximately 387 microseconds per iteration on physical hardware.
- Achieved approximately 5 microseconds for analytical inverse kinematics, 43 microseconds for learned inverse kinematics, and 210 microseconds for feedforward torque; reduced symbolic expressions by approximately 90 percent.

Research Professor

Oct 2018-Oct 2019 | UNSIJ, Oaxaca, Mexico

- Implemented real-time neural-network inverse kinematics for a 6-DoF PUMA robot and MATLAB CNN experiments for wildlife detection in camera-trap datasets.

Professor

Feb 2017-Oct 2018 | TecNM, Puebla, Mexico

- Deployed a TI-controller hardware-in-the-loop manipulator emulator at a 10 microsecond sampling period and implemented FPGA voice processing plus computer-vision experiments.

SELECTED ENGINEERING PROJECTS

Whole-Body Mobile Manipulation

Problem: hold a world-frame end-effector target while the base moves. **Contribution:** odometry transforms, arm-base coordination, redundancy handling, and teleoperation. **Hardware:** physical AgileX/Kinova. **Stack:** ROS 2, C++, Pinocchio. **Result:** onboard 400 Hz deployment. [Video](#).

Cross-Simulator Tactile Sensor Adaptation

Problem: make tactile contact data available consistently across physics engines. **Contribution:** implemented Gazebo and MuJoCo adapters, a common ROS 2 interface, and whole-body control integration, informed by Lab-CORO's Isaac Sim TSF-85 implementation. **Result:** tactile contact maps published through the same interface in both environments. [Video](#) | [TSF-85 upstream](#).

Learning-Based Predictive Control and Force-Aware Rehabilitation

Problem: constrained exoskeleton tracking with model error and human interaction. **Contribution:** Gaussian Process residual modeling, robust MPC, force/torque sensing, admittance, and force observation. **Hardware:** physical 7-DoF ETS-MARSE. **Stack:** LabVIEW RT/FPGA, C++, GP/MPC. **Result:** 387 microseconds within a 1-4 kHz stack. [Video](#).

URDF-Driven Trajectory Planning

Problem: reuse one planning interface across robot kinematics. **Contribution:** automatic joint controls, joint/Cartesian planning, inverse kinematics, limits, and trajectory analysis. **Stack:** C++, Qt, OpenGL, URDF, Ruckig. **Result:** inverse-kinematics tests up to 1 kHz. [Video](#).

TECHNICAL SKILLS

Programming: C, C++, Python, MATLAB, LabVIEW, VHDL

Robotics: ROS 2, Pinocchio, URDF, Cartesian control, redundancy resolution, whole-body control, mobile manipulation, teleoperation, motion planning

Robot Learning: PyTorch, reinforcement learning, Gaussian Processes, learning-based model predictive control, neural-network inverse kinematics

Interaction and Sensing: Force/torque sensing, admittance control, external-force observation, tactile-sensor simulation, IMU, EMG, depth cameras

Modeling and Control: Robot kinematics and dynamics, Recursive Newton-Euler Algorithm, numerical optimization, model predictive control, sliding-mode control, trajectory generation

Simulation: Gazebo, MuJoCo, Isaac Sim, Simulink, Simscape Multibody, LabVIEW digital twins

Real-Time Systems and Hardware: Real-time C++ control, LabVIEW RT/FPGA, DAQ systems, digital signal controllers, micro-controllers

Earlier Machine-Learning Experience: TensorFlow, convolutional neural networks, computer vision

EDUCATION

2020-2023 | PhD in Robotics: Learning-Based Upper-Limb Robotic Rehabilitation, ÉTS, Montréal

2014-2016 | M.Sc. in Robotics: Hardware-in-the-Loop Simulation of a Robotic Manipulator, Universidad Tecnológica de la Mixteca

2009-2014 | B.Eng. in Mechatronics: Universidad Tecnológica de la Mixteca, CENEVAL EGEL Outstanding distinction
